WHAT ARE THE CASE-BASED LESSONS?

Case-based lesson is an integrated tool that helps people set and track goals, learn unique content at their own pace and complete deeper learning projects.

Thousands of schools from around the world are using case-based lessons. Nowadays the cases are the most popular method in the world for obtaining new knowledge as well as educational and practical information packed into an attractive and unique form, texts and visualization.

Edu Future Corporation is one of the world's largest developers of educational platforms for education systems of the future, organized in 2007 to introduce the most advanced educational and knowledge technologies, proven interactive methods, with crossed knowledge, including science, culture, business, psychology, informatics , globalism, media and communication.

Our team consists of experienced authors, practice teachers, scientists and educators, who perfectly know the foundation of knowledge, relevant applications and keep track of all the latest updates and trends.

WHAT ARE ADVANTAGES OF THE CASE-BASED LESSONS?

- ✓ In unique modules you will get acquainted with technologies, myths, advantages and disadvantages. You will learn how to apply the selected information to improve your life.
- ✓ Each lesson is an interactive tutorial that contains dynamic projects and visualization.
- ✓ The material is structured so that you get a consistent expansion of knowledge and skills.
- ✓ In each lesson there are 3-5 videos, 5-10 categories, 10-15 slides of infographics, 3-5 easy tasks for a time, memory and sharpness of mind, 1-2 tests.
- ✓ The lesson contributes in an unobtrusive and fascinating manner to the disclosure and development of your own potential. You will find in yourself those qualities that you did not pay attention to before.
- ✓ The lesson is available and understandable to the widest possible range of readers, from schoolchildren to pensioners.
- ✓ Edu Future pioneered a learner-centred, problem-based, interdisciplinary approach to learning that is now known worldwide as the “Edu Future Model of Knowledge Hypermarket”.
- ✓ This is a very new technology, which uses integral approach by combining the variety of incongruous matrix. The interactive dynamic method allows working to all students and teachers-coaches together in the classroom and online.

WHAT IS THE FORMAT OF THE CASE-BASED LESSONS?

- ✓ Lessons presented in vivid, formal and informal exposition.
- ✓ The lessons can be used for groups and as individual trainings.
- ✓ Every case-based lesson has a central object for the acquisition of complex interrelated knowledge from the fields of math, social science, history, physics, geography, biology, business, art, informatics, etc.
- ✓ The passing of the lessons topics can be either sequential or in no particular order, that gives an advantage of flexibility and individual adjustment.
- ✓ The lesson format allows using the technologies of “flipped classroom”, “blended learning”, “alternate students”, “online”, etc.
- ✓ The most important advantage is to learn and master a set of significant skills: critical thinking, system vision, communication, collaboration, choosing main priorities, achieving goals, etc.

Why is food important?

Have you ever thought why do we several times a day wish each other "have a nice meal"? This is because food is a source of health and a way to cope with depression and low mood. From what we eat depends on our ability to enjoy life, work and And with malnutrition we become sick and nervous.

Why is the food sometimes tasteless and even harmful? How to find a balance of vitamins and proteins, sweet and useful, well as what types of food are waiting for us in the future? Answers to these questions are not hard to find.

An illustration of the ratio of products in a balanced diet is a diet food pyramid. As you can see, the diet is dominated by (base of the pyramid), fruits and vegetables (second floor). The percentage of the diet of animal products – meat and dairy poultry, beans, eggs and nuts (third floor) is reduced, while the share of fats and sweets – even less (top floor of the pyramid).

Food pyramid

Nutrition problems apply to all: every person, and the planet as a whole, despite the fact that the volume of food producer the world is enough to provide each person. But why do we speak about hunger in the world?

The food crisis sweeping the world

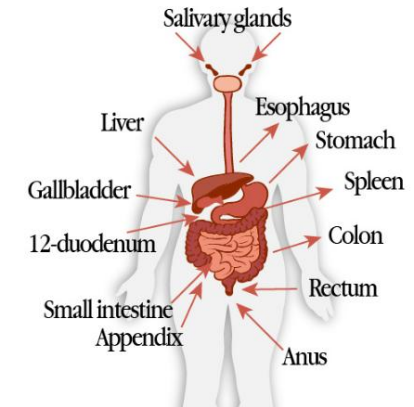

Anatomy and Physiology

Few people think about what kind of mechanical and chemical processing of the food is exposed to from the moment of contact with the body and to its assimilation.

More digestion begins in the mouth where it is ground and moistened with saliva. Saliva is released by the salivary glands and the glandular cells of the oral cavity under the influence of nutrients on the taste buds of the mouth and tongue.

Salivation is also stimulated by the smell of food, its appearance and even when a hungry person thinks about food. Taste reflexively stimulates the secretory function of the pancreas, stomach and intestines. Saliva is first digestive juice, it also contains a substance (lysozyme), which kills some bacteria that contaminant food.

Under the influence of enzymes (amylase and maltase) happens a process of disintegration of carbohydrates. The chopped food moistened with saliva, forms the food bolus, which if swallowed into the stomach.

The stomach is a muscular hollow organ in the walls of which there are glands that produce gastric juices. Under the influence of gastric juice, which is composed of hydrochloric acid and enzymes (pepsin) in the stomach is a partial digestion of proteins to albumoz and leptons.
